What is InfoStar?

InfoStar is an exciting new wireless information system that supports the SC2004 conference theme, "Bridging Communities," in a unique way. Designed by a multidisciplinary Special Initiatives volunteer team from industry, national labs, and academia, InfoStar combines multiple data sources, wireless communications, collaborative software, and an innovative data clustering and visualization technology to provide conference attendees with unprecedented access to SC conference information on a real-time basis. InfoStar also makes it possible for exhibitors and SC2004 planners to upload new information throughout the conference to keep attendees up-to-date about activities and events at the click of a button. Information is delivered quickly and conveniently over the SCinet wireless (or wired) network.

Valuable Information

When You Want It, How You Want It!

Through InfoStar, conference attendees can access:

- Interactive show floor maps
- Exhibitor and booth information
- Technical program information (agendas, speaker bios, special notes)

Become completely immersed with conference mobility at SC04 with constant updates, conference data, and other information.

InfoStar is accessible from any computer with SCinet access. Special features are built into InfoStar for optimal viewing on wireless-enabled laptops, tablet PCs, Windows mobile-based Pocket PCs, and BlackBerry handhelds.

All this at NO EXTRA COST to registered SC attendees and exhibitors.
